	Job 72101 Hal Lundsford Anderson Columbia Walton county-Hwy 98 S-57, Station 354	704b Stabilization Type 605/705/707	15-25 Sec / 97-98% Spray is best, dry will work

Note: High swelling clay and organic mix will require solid soil cover using mulch or straw with the above Silt Stop to assure stabilization. The higher the # of the Silt Stop material, the greater the runoff water clarity for this soil. The above Flocc Log will clean the water from this soil type well. Due to high organic content a trash rack on all stand pipes should be used and the use of Jute to filter through ditch lines is suggested for best water clarity.
